

Essential steps to start using AhsayCBS Console & AhsayOBM/ACB Clients

Index

Step 0). Network Configuration

Step 1). Install AhsayCBS

Step 2). Configure User Home

Step 3). Add Predefined Destination

Step 4). Add Policy Group, User Group and User

Step 5). Apply Predefined Destination to a Policy Group

Step 6). Download and install AhsayOBM / AhsayACB on client computer

Step 7). In AhsayOBM / AhsayACB, login to your AhsayCBS, and configure your backup set

Step 8). Fire a backup manually

Step 9). Check Logs and Reports

Optional Setting 1). Change the default encryption type

Optional Setting 2). Bandwidth control

Step 0). Network Configuration

- We assume your AhsayCBS is running on a physical backup server machine located in your datacenter, or a cloud VM.
- To have an AhsayCBS that can be accessible by your remote customers, these are the networking configuration required:
 - A fixed public IP for the backup server.
 - An easy to remember domain URL.
(It's necessary only if you allow your customers to login to the web console to trigger certain types of backups, or to edit their settings. Some of our partners don't let their customers do so, and thus not offering the web console address to them.)
 - Map your domain to the fixed public IP of your backup server.
 - Allow incoming traffic to your backup server through configuring your firewall.

Step 1). Install and Login to AhsayCBS

- You can install AhsayCBS on
 - Your own server hardware by AhsayUBS
 - Your own server hardware with Windows or Linux OS
 - Azure or Amazon EC2 cloud VM with Windows or Linux OS
 - Window or Linux installation guide is available at:
http://download.ahsay.com/support/document/v7/guide_cbs_quick_start.pdf
- Login to AhsayCBS with default Administrator account:
 - Username: system
 - Password: system

Step 2). Configure User Home

- A User Home refers to directories where AhsayCBS stores the user profile, backup log, and backup data (if you allow your users to backup their data on your AhsayCBS server) all your backup users.
- If your users' backup data are not stored in the User Home (e.g. if your AhsayCBS is installed in a VM on cloud platform and you plan to use cloud storage as the final backup destination), then a User Home with 10GB free space should be good enough to get started.
- If your users' backup data are to be stored on your AhsayCBS storage (e.g. if your AhsayCBS is installed your physical server with hard drives used for storing the backup data), then you should set User Homes to directories with a lot of free space.
- You can have multiple User Homes on AhsayCBS.

To configure User Home, click here.

Configure the user home directory(ies) for storing all user data.

User Home ?

+ -

<input type="checkbox"/>	Directory	Current QPS Ratio	Maximum QPS Ratio
<input type="checkbox"/>	C:\Program Files\AhsayCBS\user	0% (0 / 80.01 G)	Unlimited

After installation, there will be a default user home created for you. E.g. for Windows version, the default drive is the system drive. We strongly suggest you to use another non-system drive if available, so that in case your system drive crashed, your data in User Home won't be affected.

Configure the user home directory(ies) for storing all user data.

User Home ?

Directory

Current QPS Ratio

Maximum QPS Ratio

C:\Program Files\AhsayCBS\user

0% (0 / 80.01 G)

Unlimited

You can add a new User Home by clicking this "Add" button.

User Home

Home Directory

Password protected network drive

Maximum QPS Ratio

Enter the path of your User Home.
UNC path is supported here.

If it is a password protected network drive, click the checkbox and enter Login Name and Password afterward.

User Home

Home Directory

Password protected network drive

Maximum QPS Ratio

To ensure user accounts are evenly distributed across your user home drives. We do not recommend you to set the QPS Ratio (Quota - Partition Size Ratio) of each user home drives to “unlimited” or “Not Used”. For AhsayCBS servers with multiple user homes, you should consider a QPS setting of 50% to 70% for each user home drive. This will prevent user accounts being concentrated onto one drive, which may cause the drive to run out of disk space very easily. This could result in data corruption on the affected user home(s). Also, an even distribution of user accounts across your AhsayOBS user homes will improve backup performance, by spreading the disk I/O load.

Configure the user home directory(ies) for storing all user data.

User Home ?

<input type="checkbox"/>	Directory	Current OPS Ratio	Maximum OPS Ratio
<input type="checkbox"/>	C:\Program Files\AhsayCBS\user	0% (0 / 80.01 G)	70
<input type="checkbox"/>	D:\ahsaycbs-user-home		70

After a non-system drive is added, you can delete the default user home, and click "Save" to save all the changes to AhsayCBS.

Step 3). Add Predefined Destination

- A Predefined Destination is the storage that “AhsayCBS” will use for storing users’ backup data. E.g. if you’re an MSP and you want your users to backup their data to “your” Microsoft Azure cloud storage, that you should define your Microsoft Azure cloud storage as a “Predefined Destination” (Firstly create the destination in AhsayCBS > System Settings > Backup > Predefined Destinations, and then enable it through Policy Group > [A specific policy group] > Backup Set Settings > Predefined Destination). You can name a Predefined Destination as whatever name you prefer, e.g. “My-Storage-01” in the example, which is a Google Drive storage but the actual storage is transparent to users. The Google Drive logo won’t be displayed on AhsayOBM/AhsayACB side.

Configure the predefined destinations that can be used by this server below.

Predefined Destination ?

<input type="checkbox"/>	Name	Destination Storage	Info	Owner
<input type="checkbox"/>	Cloud-Storage-for-Client-A			Google Account: Ahsay Backup

After a Predefined Destination is added to AhsayCBS, it's not immediately available to your users. You need to apply this Predefined Destination to a Policy Group to make it available for the users covered by that Policy.

- Please note that after you have added a Predefined Destination into AhsayCBS, this new Predefined Destination is not yet usable by your users. It is because for different groups of users, you may want to use different Predefined Destinations for storing their backup data. Therefore, a Predefined Destination needs to be applied to a specific Policy Group in order to be usable by a certain group of users. You'll see how to do it in Step 5.

Step 4).

Add Policy Group, User Group and User

- If you want each client site to have a dedicated Predefined Destination, you can create a Policy Group for that client, create a User Group for that client and assign the Policy Group to this User Group, and then add User and assign this user to the created User Group.
- This section will show you how to:
 - 4.1. Add a Policy Group
 - 4.2. Add a User Group and assign Policy to it
 - 4.3. Add a User and assign User Group to it

4.1). Add a Policy Group

Highlight the whole key with your mouse, and press "Ctrl + C" on your keyboard to copy this Encryption Key.

The screenshot shows the AhsayOBM interface with a backup set configuration window open. A Notepad window is overlaid on top, displaying the following text:

```
Client-A-User-1  
Backup Set: default-backup-set-name-1  
Encryption key: JS0b7G15GHggR2VQE+vgfdT83Dmhu0Hbv1m5IdHfLco=
```

The encryption key is circled in red. A red arrow points from the circle to a yellow text box containing the following instructions:

Paste the Encryption Key onto a text editor and save this encryption key file securely on another machine or cloud storage, so that when your AhsayOBM/AhsayACB machine is crashed and you need to restore backed up data on another machine, you can have this Encryption Key to decrypt the backed up data.

The background interface shows a sidebar with options like General, Source, Backup Sched, Continuous Ba, Destinatio, In-File De, Retention, Command Lin, Reminder, Bandwidth Co, Others, and Hide advanced setting. At the bottom, there are buttons for 'Delete this backup set', 'Save', 'Cancel', and 'Help'.

If worry about your users will forget copying and saving their encryption keys, go to “Optional Setting 1). Change the default encryption type” of this guide below to change the default encryption type from “Default” to “Custom”, so that they will enter their own encryption keys.

Step 8).
Fire a backup manually

Destinations

- Cloud-Storage-for-Client-A
- Local-1 (D:\ahsay-local-backup)

Retention Policy

- Run Retention Policy after backup

[Hide advanced option](#)

For the first backup job, this option doesn't matter, as it will trigger full backup anyway. But if you have previous backups for this backup set, then, you can choose to run Full, Differential or Incremental backup as needed.

Here, you can choose where to backup to.

Again this option doesn't matter in the first backup job. For the subsequent backup job, if you check this option, after the backup job, the software will check if there are any files that are out of retention policy, and if yes, those files will be deleted from the backup server.

Step 9).
Check Logs and Reports

9.1). Logs in AhsayCBS for Administrator

The screenshot displays the AhsayCBS web interface. At the top, the browser address bar shows '127.0.0.1/cbs/index.do'. The interface includes a search bar, a 'system' dropdown, and a language selector set to 'English'. The main content area is organized into three sections: 'Monitoring', 'Backup / Restore', and 'System Settings'. The 'Monitoring' section contains six tiles: 'Dashboard', 'Live Activities', 'Administration Logs', 'Backup / Restore Logs', 'Replication Logs', and 'Redirection Logs'. The 'Backup / Restore' section contains four tiles: 'Basic', 'Users, Groups & Policies', 'Sending Data', and 'Accepting Data'. The 'System Settings' section contains three tiles: 'Basic', 'Advanced', and 'License'. A red oval highlights the four log-related tiles in the 'Monitoring' section. A red arrow points from this oval to a yellow callout box with the text 'The Logs on AhsayCBS are located here.'

9.2). Setup SMTP for Sending Email Reports to Administrators and Users

You can use Gmail SMTP for sending AhsayCBS email reports. The following example will show you how you can do it. The steps for using your own SMTP server should be the same.

- My Account
- Welcome
- Sign-in & security
 - Signing in to Google
 - Device activity & notifications
 - Connected apps & sites
- Personal info & privacy
 - Your personal info
 - Manage your Google activity
 - Ads Settings
 - Control your content
- Account preferences
 - Language & Input Tools
 - Accessibility
 - Your Google Drive storage
 - Delete your account or services
- About Google
- Privacy Policy
- Help and Feedback

Sign-in & security

Allow less secure apps: ON

Some non-Google apps and devices use less secure sign-in technology, which could leave your account vulnerable. You can turn off access for these apps (which we recommend) or choose to use them despite the risks.

To use your Gmail account for sending AhsayCBS email reports, you need to go to your Gmail account > My Account > Sign-in & security > Allow less secure apps, and enable this option.

Your security comes first in everything we do.
[LEARN MORE](#)

My Account

Sign-in & security

9.3.4). Restore Report

In the Daily User Report email, when you click on a “Download” link of a backup report, the report will look like this.

Dear aTester1102,

Here is the summary of the restore job "2016-11-03-11-11-00". Full restore report is also attached for your reference.

Restore Job Summary

User	aTester1102
Backup Set	default-backup-set-name-1
Restore Job	2016-11-03-11-11-00
Job Status	OK
Restore Time	11/03/2016 11:11:00 - 11/03/2016 11:11:02
IP Address	192.168.6.161
Destination Name	CBS
Restored Files	0(0)

Sincerely,
Ahsay Support Team

9.3.5). Low Disk Space Alert

If you have checked for receiving Low Disk Space Reminder / Alert, when the available disk space on your AhsayCBS is lower than the threshold you defined, you will receive this email.

Email me Low Disk Space Reminder / Alert Report

Send Low Disk Space Reminder when total used space is over %

Send Low Disk Space Alert Report when total used space is over %

Dear Administrator,

Disk usage on E Drive is over 80%. Please upgrade your storage space to avoid backup failure due to full storage.

Sincerely,
Ahsay Support Team

9.3.6). Low Destination Space Alert

If you have checked for receiving Low Destination Space Reminder / Alert, when the available disk space on your Predefined Destinations is lower than the threshold you defined, you will receive this email.

Email me Low Destination Space Reminder / Alert Report

Send Low Destination Space Reminder when total destination space is over %

Send Low Destination Alert Report when total destination space is over %

Dear Ronnie,

Your used storage quota on ronnie.chan@gmail.com (Google Drive) is over 80%.

Please upgrade your storage quota or modify your retention policy to free up more space to avoid backup failure due to full storage.

Sincerely,
Ahsay Support Team

9.4). Email Reports to Users

You can configure what reports to send to your users in Policy Group > User Settings > Email Reports

The screenshot shows the 'Email Reports' configuration page in a web browser. The browser's address bar shows the URL: 127.0.0.1/cbs/obs/policy/EditPolicy.do?id=2. The page title is 'Email Reports'. The configuration options are as follows:

- Backup Report
- Restore Report
- Missed scheduled backup reminder
- User settings changed alert
- Active Directory authentication failure report
- Backup Quota Reminder / Alert
Send backup quota reminder to user if the backup quota is over %
- Trial User Reminder / Alert
Send trial user reminder to user if the reminding day(s) is less than
- Welcome email
- Email me consolidated email report only at this time daily
 : (hh:mm)
- Email me inactive backup report when my backup set hasn't run for this number of days

Below the configuration options, there is a section for 'Bcc reports to email' with a table:

<input type="checkbox"/>	Name	Email	Encrypt Email
<input type="checkbox"/>			

- User settings changed alert
- Active Directory authentication failure report
- Backup Quota Reminder / Alert
Send backup quota reminder to user if the backup quota is over %
- Trial User Reminder / Alert
Send trial user reminder to user if the reminding day(s) is less than
- Welcome email
- Email me consolidated email report only at this time daily
 : (hh:mm)
- Email me inactive backup report when my backup set hasn't run for this number of days

If you (AhsayCBS administrator) also want AhsayCBS to BCC user's emails to you, you can add your contact email here.

Sincerely,
Ahsay Support Team

9.4.3). Missed schedule backup reminder

Dear Ronnie,

Your backup job "20150616110000" of "myBackupSet-01" was missed. Please check the client software configuration to see if everything is running correctly. Below is the backup activity of this backup set.

User	ronnie.chan	
Backup Set	myBackupSet-01	
Backup Statistics	Data Area*	139[1.42G]
	Retention Area*	2209[1.93G]
	backup Quota	10G
	Remaining Quota	6.65G
	* Unit = No. of files [Total file size]	
Last Backup Time (Days Without Backup)	14-May-2015 10:56:00 (2 Days)	
Missed backup Job	20150616110000	

You are suggested to perform a backup manually for this backup set to avoid undesired data loss.

Sincerely,
Ahsay Support Team

9.4.4). User settings changed alert

Dear Ronnie,

One or more of your backup settings have been updated. Please confirm the information shown below is correct, and that these changes were requested by an authorized user on your contact list.

If the changes were not made by an authorized user, change your password, correct your settings and see if this happens again. If this happens again, please contact us for further investigation.

User	ronnie.chan		
Time of Changes	2015-06-17 11:47:00		
IP Address	192.16.7.21		
Changes	Backup Set	myBackupSet-01	
	Field	Old Value	New Value
	Backup Source	C:\Settings\Documents \Photos\2014\	C:\Settings\Documents \Photos\2015\
	Backup Schedule	Every Wednesday at 16:00 until backup finished	Every Friday at 16:00 until backup finished

Sincerely,

9.4.5). Active Directory authentication failure report

Dear Ronnie,

Active Directory authentication failure with amerge at Wed Mar 18 18:09:59 CST 2015.

If the Windows login password of the Active Directory user amerge was changed recently, please login to [backup server](#) using the backup client or web console with the latest password, otherwise, your Active Directory account may be locked.

If the Active Directory user amerge has already been locked, please contact your system administrator to un-lock the account.

Sincerely,
Ahsay Support Team

9.4.10). Inactive Backup Report

Dear Ronnie,

Your backup set "myBackupSet-01" haven't performed any backup for 30 days. Please [contact your administrator](#) for necessary action. Below is the backup activity of this backup set.

User	ronnie.chan
Backup Set	myBackupSet-01
Last Backup Time	15-May-2015 10:56:00
Days Without Backup	30 days without backup
Notification Days	30

Sincerely,
Ahsay Support Team

Optional Setting 1).
Change the default encryption type

Some partners have concern that if users have chosen “Default” encryption type and forgot to save their encryption keys, they won’t be able to restore after their original machines crashed.

To solve this:

- 1). You can set the default encryption type from “Default” to “Custom” and let users to input their own encryption keys
- 2). Make users upload their encryption keys to AhsayCBS after backup.

1.1). Set the default encryption type from
“Default” to “Custom”

The screenshot shows the AhsayCBS web interface. At the top, there is a browser address bar with the URL '127.0.0.1/cbs/index.do'. Below the browser, the AhsayCBS logo is on the left, and 'system' and 'English' are on the right. The main content area is divided into three sections: 'Monitoring' (pink tiles), 'Backup / Restore' (blue tiles), and 'System Settings' (orange tiles). The 'Monitoring' section includes Dashboard, Live Activities, Administration Logs, Backup / Restore Logs, Replication Logs, and Redirection Logs. The 'Backup / Restore' section includes Basic, Users, Groups & Policies, Sending Data, and Accepting Data. The 'System Settings' section includes Basic, Advanced, and License. A red circle highlights the 'Users, Groups & Policies' button, and a red arrow points from it to a yellow callout box. The callout box contains the text: 'To change the default encryption type from "Default" to "Custom", click this button.'

To change the default encryption type from "Default" to "Custom", click this button.

Group Policy is designed to simplify administration and to reduce the effort required for managing groups of backup users, e.g. security settings and backup set settings. It allows administrator to tailor features and services for different user groups.

Manage Policy Group ?

<input type="checkbox"/>	Name	Owner
<input type="checkbox"/>	Client-A-Policy	--
<input type="checkbox"/>	Default settings	--

Select "Default settings" policy group if you want to change the default encryption type for all users.

Group Policy is designed to simplify administration and to reduce the effort required for managing groups of backup users, e.g. security settings and backup set settings. It allows administrator to tailor features and services for different user groups.

Manage Policy Group ?

<input type="checkbox"/>	Name	Owner
<input type="checkbox"/>	Client-A-Policy	--
<input type="checkbox"/>	Default settings	--

Finally, click "Save" to save the change to AhsayCBS.

1.2). Make users upload their encryption keys to AhsayCBS after backup.

After the change in 1.1, if you still worry about your users will select “Default” and then forgot to save the encryption keys, make sure your users will upload the encryption keys to your AhsayCBS, so that when they really lost the key, you can send their encrypted encryption key file to us (Ahsay) for decryption.

Please note that the decryption service is a chargeable service. Details:

https://www.ahsay.com/jsp/en/home/index.jsp?pageContentKey=ahsay_services_encryption-key-recovery

Add New User

Enter the backup account settings required for creating the backup account of this user. Click [Help] if you are not sure what information to enter.

Enable this policy item. And then save the change to AhsayCBS, so that all new users created will upload their encryption keys in encrypted format to AhsayCBS.

Optional Setting 2). Bandwidth control

In Ahsay Backup Software, Bandwidth Control is defined on Backup Set level. That is, each backup set will have its own bandwidth control settings that is independent to other backup sets.

Bandwidth Control can be configured through:

- 1). AhsayCBS Group Policy, or
- 2). Independent AhsayOBM / AhsayACB user account within each backup set

2.1). Configure bandwidth control on AhsayCBS

On AhsayCBS, you can configure
Bandwidth Control through Group Policy.

Bandwidth Control

You can enable Bandwidth Control and configure the settings under these 2 sections, Default Values and Preempted Values.

For Default Values, you will configure literally the default values for Bandwidth Control for selective backup sets. Those default values can be modified by users when they create their backup sets.

For Preempted Values, the Bandwidth Control settings you configured in this policy group CANNOT be modified by your users.

The configuration method will be the same for both Default Values and Preempted Values. So, I'll be using Default Values to illustrate the process.

Limit the transfer rate when performing backup

On

Mode

- Independent
- Share

Existing bandwidth controls

- Add new bandwidth control

Save Cancel Help

“Independent” means the bandwidth control settings will be applied to each backup / restore job of the backup set. “Share” means all backup and restore jobs share the same settings.

Click here to add a new bandwidth control.

AhsayOBM

Your first bandwidth rule has been created here. You can add more rules if needed by clicking the "Add" button. Otherwise, click the "Save" button below to save it.

2.3). Configure bandwidth control for individual AhsayACB users through AhsayCBS

There is no Bandwidth Control tab in the backup set settings of AhsayACB client software, as we believe that AhsayACB users are general users who would not bother to set the bandwidth control. So, we put the bandwidth control setting for AhsayACB users on the AhsayCBS side.

127.0.0.1/cbs/index.do

Limit the transfer rate when performing backup and restore tasks

Enable this feature and start configuring the backup control settings, just like that through the AhsayOBM client software interface.

Thank you!
